IN THE CLAIMS

Claim 1 (currently amended)

A balance board comprising:

a cylindrical roller;

a board member that has a lower surface that sits atop the roller and reciprocally rides on the roller either along a central longitudinal axis of the board member or along a central latitudinal axis of the board member such that a plurality of discrete opening pairs are located on the lower surface such that each one of the opening pairs is located equidistant and on opposite sides of either the central longitudinal axis of the board member or the central latitudinal axis; and
